

You are invited to the Day of Design: Connected Storm Sanctuary Teacher Training

This year, we have reimagined the Day of Design mission to be a completely virtual experience for your students.

Connected Storm Sanctuary mission overview:

In this innovative STEM learning experience, your middle and high school students will imagine and prototype solutions that use mobile technologies to create a better storm sanctuary: a temporary space where families can come together, connect, engage and be safe during, and immediately after, a natural disaster.

Your students will achieve this goal by applying design thinking strategies. This powerful methodology is widely used by start-up companies, academics, government agencies and many more who seek to create solutions for the future rather than focusing on solving problems that have occurred in the past. Its emphasis is to achieve the best possible outcome for the end user, who could be a person, an organization, or even your whole community.

Join the teacher training to learn more about the mission, the new platform, and how your students will engage with UScellular™ volunteers, and more.

Both teacher training will cover the same content. Please register to the date and time that best suits your schedule.

Date/Time

[Dec 15th, 2020 - Tuesday 6:00–7:30 CST](#)

[Jan 7th, 2021 - Thursday 5:00–6:30 CST](#)
